SYMMETRIC ENERGY SOLAR + STORAGE

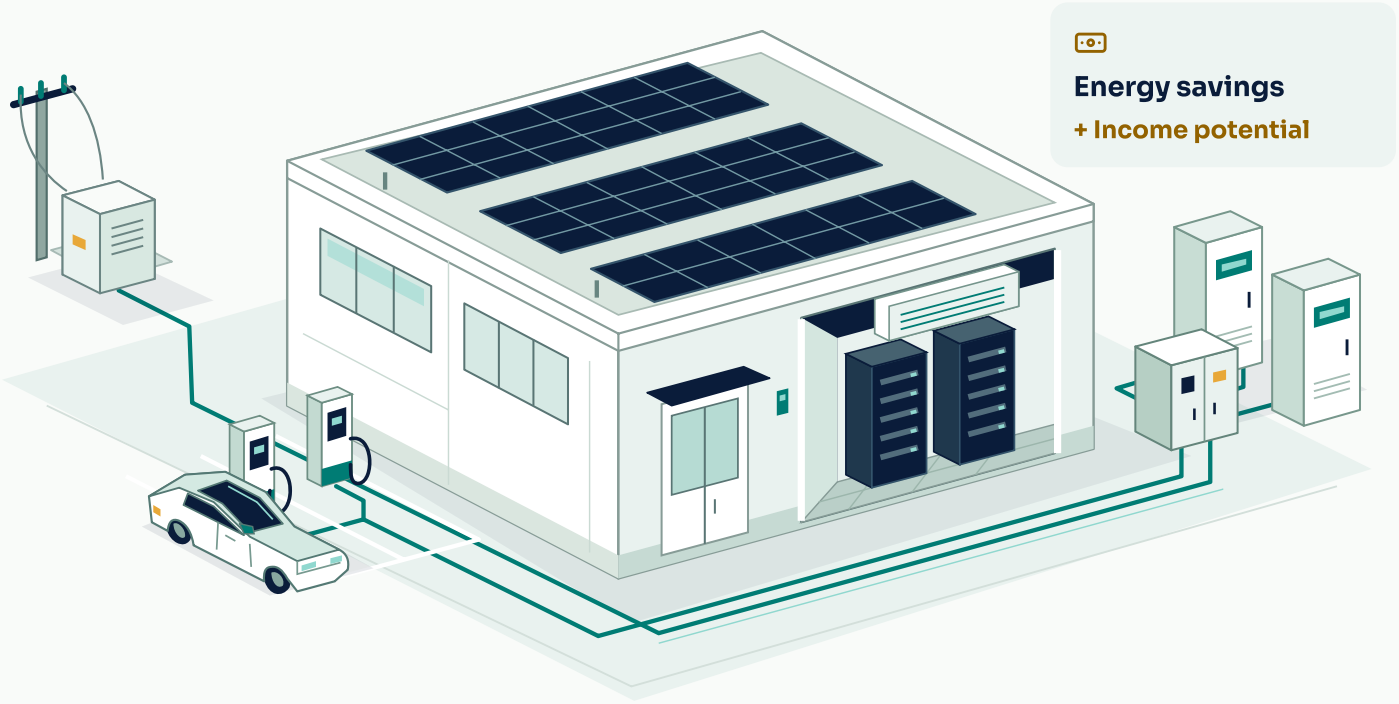

LANDLORDS + BUSINESSES THAT OWN THEIR PREMISES

SOLAR + STORAGE + ON-SITE AI COMPUTE

Lower energy costs. Unlock new income.

Solar and battery storage to reduce energy costs, paired with NVIDIA-powered servers that can generate income from paid AI workloads.

NVIDIA GPU systems in stock · Installation following site approval

COULD YOUR PROPERTY QUALIFY?

Suitable electrical capacity · Dedicated fiber · Secure space · Engineered cooling

AVOIDED COST

Lower utility costs.

Use solar and storage to manage energy purchases and peak demand.

REVENUE OPPORTUNITY

Paid AI workloads.

Equipment income, with optional EV charging.

MODULAR DEVELOPMENT

Build in practical phases.

Start with a suitable site and expand as the combined case supports it.

Start a property review.

Illustrative configuration. Revenue is not guaranteed. CA License #1107653

THE CONNECTED PROPERTY

How your property creates value.

Solar, storage and grid supply serve the building and planned compute load through one site electrical system. EV charging is optional.

AVOIDED COST

Lower energy costs.

Use solar on site and dispatch storage around energy prices and peak demand.

REVENUE OPPORTUNITY

Paid AI workload proceeds.

AI customers → Cloud platform → Owner proceeds
After contractual deductions and site costs. Optional EV charging can add fees.

Additional potential value: export bill credits and enrolled grid-program payments, where eligible.
Illustrative configuration, not an electrical design. Tariffs, permissions, enrollment and costs apply; the same energy or capacity is counted once.

Your project. One main point of contact.

YOU OWN

The compute equipment and provide the approved site.

SYMMETRIC COORDINATES

Energy development, installation, financing options and support.

THE MANAGED PLATFORM

Cloud software and workload orchestration.

OWNER-OCCUPIED PROPERTIES

Reduce energy costs for your operations and evaluate additional compute proceeds.

TENANT-OCCUPIED PROPERTIES

Offer discounted tenant solar where permitted, alongside potential compute income.

Tenant arrangements depend on lease terms, metering and utility requirements. Compute scenarios exclude utility savings, EV fees and grid-program value.

THE OWNER'S INVESTMENT SNAPSHOT

Your investment at a glance.

NVIDIA RTX PRO 6000 Blackwell · 8 GPUs

~$309k

Compute package only. Energy systems and site works additional.

95% ASSUMED BILLED USE BEFORE FINANCING AND TAX

~$73k / year

Illustrative annual operating cash

90–100% assumed use: $67k–$78k/year

23.5% package cash yield at 95% use

NVIDIA B300 8 GPUs

~$839k

Compute package only. Energy systems and site works additional.

95% ASSUMED BILLED USE BEFORE FINANCING AND TAX

~$308k / year

Illustrative annual operating cash

90–100% assumed use: $289k–$327k/year

36.8% package cash yield at 95% use

Package cash yield = annual operating cash ÷ compute-package price. It is not IRR or whole-project ROI. Additional energy/site capital reduces yield; losses are possible.

Could your property qualify?

Power + connectivity

Suitable electrical capacity and dedicated fiber.

Space + cooling

Secure space with engineered cooling, access and electrical equipment.

Rack + access only

31.5 × 47.2 in cabinet; ~26 sq ft with service zones. Additional room confirmed in engineering.

What is included in these scenarios?

Revenue inputs

730 h/month; 90/95/100% assumed billed use. RTX: $16.64/server-hour. B300: $60/server-hour.

Operating costs

$0.25/kWh; continuous 9.4 kW RTX / 18.8 kW B300. Monthly fiber/reserve: RTX $300/$250; B300 $330/$500.

Cloud deductions + owner share

Assumed 10% cloud deduction allowance, then 80% host share.

Excluded from operating cash

Debt, income tax, major repairs and replacement. No add-on income, rate increases, tax benefits or resale.

High use is a planning assumption, not verified contracted demand. Fees, reserves and utility rate are unverified inputs. Shipping, tax, cooling and energy/site capital are additional.

Start a property review.
